Nayan Brijpuria

https://github.com/Nayanbrijpurria | LeetCode: https://leetcode.com/u/cL4UOtWEXE/

SUMMARY

Computer Science (AI & ML) undergraduate with hands-on experience building AI-powered applications, including Retrieval-Augmented Generation (RAG), LLM-based assistants, NLP, sentiment analysis, and customer support automation. Strong foundation in Java and Data Structures & Algorithms.

EDUCATION

LNCT, Bhopal | RGPV
B.Tech — Computer Science & Engineering (Artificial Intelligence & Machine Learning), CGPA: 8.09/10 *2022 – 2026*

MM International School, Jabalpur
Class XII, Percentage: 73% *2021 – 2022*

MM International School, Jabalpur
Class X, Percentage: 77% *2019 – 2020*

EXPERIENCE

AI/ML Intern 2026 – Present
CuzorLabs

- Developing AI-powered solutions for the company's AI360 initiative, focused on improving customer support and business operations.
- Building an end-to-end Customer Support RAG pipeline using historical customer-support tickets containing customer, bot, and agent conversations.
- Working on data preprocessing, document chunking, embeddings, vector retrieval, and LLM-based response generation.
- Exploring AI capabilities such as customer-support automation and sentiment analysis.
- Working with real-world support data containing ticket categories, urgency, issue descriptions, conversations, and resolutions.
- Using Python, LLMs, Git, GitHub, and modern AI development workflows for prototyping and experimentation.

PROJECTS

NLP Sentiment Analysis Project | Python | NLP | Machine Learning | SpaCy

- Developed an NLP-based sentiment analysis system to classify textual data based on sentiment.
- Performed text preprocessing and feature extraction to transform raw text into machine-learning-ready representations.
- Trained and evaluated machine learning models for automated sentiment classification.
- Applied practical NLP and supervised machine learning techniques to text classification.

AI-Based Veterinary Chatbot — Offline LLM Integration | Python | LLM | Ollama | Prompt Engineering | AI Chatbot

- Developed an AI-powered veterinary chatbot capable of answering animal healthcare-related queries using a locally running LLM.
- Integrated an offline LLM using Ollama, enabling AI responses without relying on external cloud-based LLM APIs.
- Designed structured prompts to provide context-aware responses for veterinary and animal healthcare queries.
- Implemented communication between the application and local LLM server for real-time response generation.

AI-Powered Veterinary Healthcare Platform (WLC) | AI/LLM | Node.js | Express.js | MySQL | HTML | CSS | JavaScript

- Developed an AI-enabled veterinary healthcare platform for animal owners and veterinary support.
- Integrated an LLM-based veterinary assistant to answer animal healthcare queries.
- Built a questionnaire-based system for collecting symptoms and generating preliminary medical information.
- Implemented blood/donor registration and search functionality.
- Added medicine-purchase redirection and healthcare information features.

TECHNICAL SKILLS

Programming: Java, Python

AI/ML: Machine Learning, NLP, Sentiment Analysis, RAG, LLMs, Prompt Engineering, Embeddings, Vector Search

Libraries/Frameworks: HashMap, collections, Scikit-learn, SpaCy

Frontend: HTML, CSS, JavaScript

AI Tools: Ollama, Local LLMs

Developer Tools: GitHub, VS Code, MySQL Workbench

Core CS: Data Structures & Algorithms, OOP

ACHIEVEMENTS & LEADERSHIP

- 3rd Winner — State-Level Idea Hackathon | Team Leader - HackWithInfy Finalist — Selected for Specialist Programmer (SP) interview process. - Solved 150+ problems on LeetCode. - Participated in Smart India Hackathon. - Member of Rahaat Club, participating in community service and school teaching initiatives.
